Number of employees: 1 (Roxane Wicky – Managing Director)

Shareholders: 3 (Roxane Wicky – Olav Wicky – Capucine Wicky)

Legal form: Sàrl (Limited Liability Company)

Date of establishment: 2007

2. Main Activities

2.1 Description of Products and Services

Plus Sàrl acts as the interface between clients located mainly in Europe and manufacturers located in China for the design, development and production of industrial parts.

The parts are designed according to designs belonging to the clients and remain the intellectual property of the clients. From these designs, the tooling and molds required for manufacturing are developed in China at the Yuyao Mould Factory plant.

The molds are stored and managed directly in China.

Plus Sàrl then organizes the production of parts from the molds, ensuring compliance with the technical and quality requirements of the clients.

In addition, Plus Sàrl offers services for modification and improvement of tooling according to evolving client needs, as well as sourcing and procurement activities for existing parts on the market from qualified external suppliers.

2.2 Client Typology

Plus Sàrl selects its clients in accordance with its strategy aimed at responding in a comprehensive and personalized manner to all their needs. This approach ensures strong responsiveness in emergency situations, precise consideration of technical specifications and quality requirements, and lasting support in the development, improvement and procurement of industrial parts.

Clients are mainly European companies, owners of the designs, patents or technical specifications of the manufactured products.

2.2.1 Client Relationship & Long-term Partnership

The company favors a lasting relationship with a limited number of clients, based on trust, responsiveness and thorough understanding of their technical and operational needs. This proximity enables effective management of urgent requests, rapid adaptation to specification changes, and continuous support in the development, optimization and procurement of industrial parts.

This approach is part of a long-term partnership and sustainable client satisfaction logic.

2.2.2 Confidentiality and Technical Data Protection

The company places particular importance on the confidentiality of information transmitted by its clients, particularly regarding designs, patents, technical specifications and sensitive industrial data.

Guarantee the protection of confidential information, limit access to authorized persons and partners only, ensure compliance with contractual commitments and intellectual property requirements.

This control contributes to client trust and compliance with quality management system requirements.

2.3 Geographical Area

Plus Sàrl carries out its commercial management, client relations and technical coordination activities mainly with clients located in Switzerland and Europe.

Operational activities related to tooling development, mold manufacturing, storage and parts production

are carried out in China in collaboration with qualified industrial partners.

This international organization ensures optimization of production costs while maintaining a high level of requirements in terms of quality, technical compliance, deadline adherence and European client satisfaction.

2.4 QMS Scope

The quality management system covers all company activities, namely:

- Management of relationships with clients located mainly in Europe
- Analysis of needs, technical specifications and quality requirements
- Coordination of tooling and mold development with industrial partners in China
- Management, monitoring and improvement of tooling
- Production monitoring, conformity of produced parts and customer satisfaction
- Sourcing and procurement activities for existing parts
- Control of confidentiality of technical information and intellectual property

No activity influencing the quality of products and services provided is excluded from the scope of the quality management system.

3. Organization and Responsibilities

Plus Sàrl is constituted as a limited liability company (Sàrl). Given the size of the structure, all operational, management and support activities are carried out by the managing director, who assumes the following responsibilities:

- Client relationship management and needs analysis
- Technical coordination with industrial partners
- Production monitoring, parts conformity and customer satisfaction
- Supplier management, sourcing and tooling
- Documentation control and quality management system records
- Definition of quality policy, objectives and improvement actions
- Performance monitoring and implementation of continuous improvement

4.1 Understanding the Organization and Its Context

Plus Sàrl operates as an international industrial coordination activity between clients located mainly in Europe and manufacturing partners located in China.

In this context, it identifies external and internal issues likely to influence its ability to consistently provide products and services that meet regulatory requirements.

External Issues:

- Dependence on industrial partners located in China for tooling development and parts production
- Delays and constraints related to international transport and logistics
- Regulatory and customs requirements applicable to import and export operations
- Variations in production, transport and raw material costs
- High level of client requirements in terms of quality, technical compliance and deadline adherence

Internal Issues:

- Single-person organization requiring strong priority and planning management
- Need to ensure fluid and continuous communication with clients, suppliers and logistics partners
- Maintaining a high level of documentary, technical and organizational control
- Ability to guarantee responsiveness, confidentiality and sustainable client satisfaction

4.2 Relevant Interested Parties

Within the framework of its quality management system, Plus Sàrl identifies the interested parties likely to influence its ability to consistently provide products and services that meet customer requirements as well as applicable regulatory requirements.

1. European Clients

They expect products compliant with technical specifications, deadline adherence, responsive communication, and control of confidentiality and intellectual property.

2. Manufacturers and Industrial Partners in China

They are involved in tooling development, mold manufacturing and parts production. Their ability to meet technical requirements, expected quality and agreed deadlines is essential.

3. International Carriers and Logistics Providers

They ensure the shipment of goods between China and Europe. Deadline adherence, product integrity during transport and documentary compliance are critical elements.

4. Customs Authorities

They regulate import and export operations according to regulatory requirements that vary by country and transport modality. Compliance with customs regulations is essential.

5. Fiduciary and Accounting Service Provider

They ensure the administrative, accounting and fiscal compliance of the company, contributing to its sustainability and proper management of its activities.

5.1 Management Commitment

The managing director is directly involved in the implementation, maintenance and improvement of the quality management system. She personally handles all client requests within her capabilities, manages quotations and analyzes pricing, particularly by relying on the history of previous quotations to ensure coherence and control of commercial conditions.

The managing director also monitors transport and ensures compliance with announced deadlines. In case of quality issues, she coordinates exchanges between the client and industrial partners in China to identify causes, define appropriate solutions and ensure resolution of nonconformities.

5.2 Quality Policy

Management commits to implementing, maintaining and continuously improving a quality management system compliant with ISO 9001:2015 requirements, in order to fully meet the needs and expectations of its clients.

The managing director personally commits to:

- Handle all client requests with responsiveness and rigor
- Ensure coherence of commercial offers and price control
- Effectively coordinate industrial partners to guarantee product quality and conformity
- Monitor production, transport and delivery operations
- Manage nonconformities and implement actions to prevent their recurrence
- Protect confidentiality of technical information and intellectual property
- Continuously improve organization, working methods and overall QMS performance

Done in Cudrefin, February 10, 2026 – Roxane Wicky, Managing Director, Plus Sàrl

5.3 Roles, Responsibilities and Authorities

Given the size of the company, all roles, responsibilities and authorities related to the quality management system are assumed by the managing director.

6.1 Actions to Address Risks and Opportunities

The main risks identified are:

- Failure or unavailability of a supplier or industrial partner in China
- Significant delays related to international transport
- Emergence of major quality defects on already manufactured products
- Loss of an important client for the company's activity

To control these risks, Plus Sàrl implements the following actions:

- Maintaining close communication with industrial partners and reinforced production monitoring
- Selection and re-evaluation of carriers based on their reliability and performance
- Rapid treatment of nonconformities, replacement of defective parts and implementation of reinforced controls for subsequent productions
- Maintaining a relationship of trust and high level of service to retain clients

6.2 Quality Objectives

To implement its quality policy and continuously improve client satisfaction, Plus Sàrl defines the following quality objectives:

- Deadline compliance: Ensure rigorous monitoring of production and transport. Indicator: Ship/train ± 10 days, Air ± 3 days from target delivery date.
- Product conformity and quality: Guarantee conformity of delivered parts. Indicator: Number of nonconformities and replacement time.
- Price condition control: Maintain coherent and competitive pricing. Indicator: Price stability over several years.
- Client responsiveness: Respond promptly to all client requests. Indicator: Average response time and expressed satisfaction level.

7. Support

7.1 Resources

Essential tools include: computer with necessary software, FileMaker management system, email for formal exchanges, internet access, WeChat application for operational exchanges with Chinese partners, and a mobile phone ensuring availability.

7.2 Competencies

Given the single-person structure, the managing director possesses and implements the organizational, relational, technical and decision-making competencies essential to the proper functioning of the company, including:

- Strong availability ensuring service continuity and responsiveness
- Ability to define priorities in the overall management of the company
- Ability to evaluate competency limits and refuse a product when a compliant solution cannot be guaranteed
- Relational skills and human sense for managing complaints and maintaining trust
- Ability to implement rapid solutions, including commercial adjustments when necessary
- English language communication capability with international partners
- Availability to travel to Chinese partners, clients or customs authorities to resolve critical situations

7.4 Communication

Communication with clients is conducted primarily by email. Communication with Chinese industrial partners is primarily via WeChat, supplemented by email when necessary. Communication with carriers is mainly by email, and for the main carrier also via WeChat.

7.5 Documented Information

Main documented information is maintained in: FileMaker system (product library, order tracking, prices, transport), email (traceability of exchanges), files held by Chinese partner (technical and production data), and files stored on the company computer.

8. Operations

8.1 Operational Planning and Control

For existing products, the company has information for rapid initial assessment: production lead times (usually 24-48h from supplier), approximate historical lead times in FileMaker, and standard product pricing.

8.2 Product Requirements

Orders are generally transmitted by the client as purchase orders or emails. After receipt, the order is recorded in FileMaker. Plus Sàrl then sends an acknowledgment confirming the ordered quantity, applicable price and estimated delivery date.

8.3 Design and Development - EXCLUDED

Plus Sàrl does not perform product design and development activities within the meaning of ISO 9001:2015. Designs, technical specifications, patents and product characteristics are provided by clients or defined by industrial partners. The requirements of paragraph 8.3 are considered non-applicable.

8.4 Control of Externally Provided Processes

The organization relies primarily on a historic industrial partner in China (Yuyao Mould Factory), present since the company's creation. This main partner plays a central role in: selection and qualification of new subcontractors, evaluation of technical feasibility, and monitoring of production and quality.

Plus Sàrl also collaborates with a second important industrial partner, specialized in the production of certain product categories, without subcontracting for these productions.

8.5 Production and Service Provision

Parts production is carried out by industrial partners located in China, under Plus Sàrl's coordination. The company plans to reinforce the formalization of production monitoring, particularly through direct observation of practices during a planned visit to industrial partners in China.

8.6 Release of Products and Services

Product release is carried out after receipt of goods by the client and in the absence of complaints in the days following delivery. This absence of complaint constitutes implicit confirmation of product conformity.

8.7 Control of Nonconforming Outputs

As a general rule, nonconforming products are replaced to guarantee client satisfaction. Financial conditions associated with replacement are discussed with the supplier concerned. When the client accepts the product despite the deviation, the goods may be kept as-is.

9. Performance Evaluation

9.1 Customer Satisfaction

Customer satisfaction is primarily evaluated based on: absence of complaints after delivery, thank you or satisfaction messages from clients, qualitative feedback in email exchanges, and continuity of commercial relationships and order renewals.

9.2 Internal Audit

Plus Sàrl will conduct internal audits at planned intervals to verify the QMS. Given the single-person structure, the internal audit is conducted as a structured annual review covering: compliance with defined processes, nonconformity and complaint management, quality objective monitoring, and document control and information traceability.

9.3 Management Review

The managing director conducts, at planned intervals and at least once a year, a review of the QMS. This review considers: status of actions from previous reviews, evolution of context, QMS performance information (including satisfaction, NCs, corrective actions, quality objectives), internal audit results, and improvement opportunities.

10. Improvement

10.1 General

Plus Sàrl implements actions aimed at continuously improving the relevance, adequacy and effectiveness of its quality management system.

10.2 Nonconformity and Corrective Action

When a nonconformity occurs, the company implements necessary actions including: replacement of nonconforming products, adaptation of logistical or organizational conditions, reinforced monitoring of industrial partners or carriers, and any measure to improve the reliability of future operations.

10.3 Continuous Improvement

This improvement is based on: experience acquired in order management, NC analysis, progressive evolution of organization and supplier choices, and consideration of client feedback, internal audit results and management review.
