

UPDATE 10.2 / 10.3 / 9.3

10.2 Nonconformity and Corrective Action

For each significant nonconformity, Plus Sarl:

1. Analyzes the cause of the problem through exchanges with the customer and the industrial partner.
2. Identifies whether the cause is:
 3. production defect
 4. human error
 5. labeling problem
 6. logistics problem
 7. lack of initial clarification
8. Defines an appropriate corrective action.

Corrective actions may include:

- strengthening quality control
- reminder of technical requirements
- implementation of a specific attention note at the supplier
- improvement of specification clarification
- modification of an internal process

In the case of repetitive nonconformity, an in-depth analysis is carried out to prevent any recurrence.

The effectiveness of corrective actions is verified during subsequent productions.

A corrective action register will be implemented in FileMaker or in a document at the supplier, distinguishing:

- supplier nonconformities
- carrier nonconformities
- nonconformities related to misuse or client clarification

10.3 Continual Improvement

Plus Sarl continually improves its quality management system in order to ensure:

- lasting customer satisfaction

- compliance with deadlines
- reduction of nonconformities
- management of industrial partners
- stability and reliability of operations

The effectiveness of improvements is evaluated based on:

- the absence of significant complaints
- compliance with announced deadlines
- the stability of customer orders
- the maintenance of lasting relationships with partners

Improvement Triggers

Improvements may be initiated following:

- a nonconformity
- a logistics delay
- customer feedback
- the analysis of performance indicators
- observations made during on-site visits at industrial partners in China

Regular trips to China constitute a major lever for continual improvement, enabling:

- strengthening communication
- optimizing production processes
- improving the understanding of quality requirements
- adjusting control and monitoring procedures

Verification of Effectiveness

An improvement is considered effective when:

- delays decrease
- nonconformities do not recur
- exchanges are smoother
- customers maintain their confidence and their orders

Improvement decisions are consolidated during the annual management review.

9.3 Management Review (Enhanced Version)

9.3 Management Review

Management carries out at least one annual review of the quality management system to ensure:

- its relevance;
- its adequacy;
- its effectiveness;
- its alignment with the company's strategy.

1. Review Input Elements

The management review takes into account:

a) Indicator Results (9.1)

- Compliance with deadlines;
- Number and nature of nonconformities;
- Supplier performance;
- Customer satisfaction level.

b) Status of Corrective Actions (10.2)

- Analysis of significant nonconformities;
- Actions implemented;
- Verification of their effectiveness.

c) Status of Risks and Opportunities (6.1)

- Risks related to industrial partners;
- Logistics risks;
- Risks related to deadlines;
- Identified improvement opportunities.

d) Performance of Industrial Partners (8.4)

- Reliability;
- Responsiveness;
- Stability of the relationship.

e) Resources (Chapter 7)

- Adequacy of digital tools;
- Possible need for process reinforcement;

- Internal organization.

f) Improvement Opportunities (10.3)

- Improvements implemented;
- Improvements planned;
- Results of visits to China.

2. Decisions and Actions from the Review

The management review allows:

- defining new quality objectives if necessary;
- deciding on corrective or preventive actions;
- strengthening supplier selection or monitoring;
- adjusting operational processes;
- planning priority improvements.

Decisions are formalized in a management review report.

3. Frequency

The management review is carried out at least once a year. Intermediate reviews may be conducted in the event of a major occurrence.
